# ISO9001:2015 Quality Management System Internal Quality Audit (IN-HOUSE / PUBLIC TRAINING PROGRAMME)

SBL  
Scheme

## Introduction

Quality auditing is an important activity of any business entity. This course provides an in-depth understanding of the various methodologies used for both “first party” (internal) and “second party” (external/supplier) auditing to ensure the assessment is carried out in an effective manner.

Quality audit is also the process of systematic examination of a quality management system carried out by an internal or external quality auditor or an audit team. It is an important part of organization's quality management system and is a key element in the ISO quality system standard, ISO 9001. It is typically performed at predefined time intervals and ensure that the institution has clearly-defined internal quality monitoring procedures linked to effective action. This can help determine if the organization complies with the defined quality system processes and can involve procedural or results-based assessment criteria.

With the upgrade of the ISO9001 series of standards from the 2000 to 2008 series, the focus of the audits has shifted from purely procedural adherence towards measurement of the actual effectiveness of the Quality Management System (QMS) and the results that have been achieved through the implementation of a QMS.

## Learning Outcomes/Objectives
