IATF16949:2016 Automotive QMS Effective Process Approach Internal Quality Audit (IN-HOUSE / PUBLIC TRAINING PROGRAMME)

SBL
Scheme

Introduction

Quality auditing is an important activity of any business entity. This course provides an in-depth understanding of the various methodologies used for both “first party” (internal) and “second party” (external/supplier) auditing to ensure the assessment is carried out in an effective manner.

Quality audit is also the process of systematic examination of a quality management system carried out by an internal or external quality auditor or an audit team. It is an important part of organization's quality management system and is a key element in the automotive quality system standard, IATF16949:2016. It is typically performed at predefined time intervals and ensures that the institution has clearly-defined internal quality monitoring procedures linked to effective action. This can help determine if the organization complies with the defined quality system processes and can involve procedural or results-based assessment criteria.

With the upgrade of the IATF16949 series of standards from the 2009 to 2016 series, the focus of the audits has shifted from purely procedural adherence towards measurement of the actual effectiveness of the Quality Management System (QMS) and the results that have been achieved through the implementation of a QMS.

Learning Outcomes/Objectives

Also available as
in-house programme

This course is to provide participants with the background, knowledge and skills in internal quality auditing based on IATF16949:2016 standard to:-

- achieve the ability to conduct an effective audit through audit trials
- help to streamline the role of auditor and auditee.
- understand the techniques and methodologies in Quality Audit.
- help participants to understand the communication skills required.
