OHSAS 18001:2007 OCCUPATIONAL, HEALTH & SAFETY MANAGEMENT SYSTEM INTERNAL AUDIT TRAINING (PUBLIC / IN-HOUSE TRAINING PROGRAMME)

Introduction

The **OHSAS 18001:2007** is an **Occupational, Health and Safety management standard**. It defines a set of occupational health and safety (OH&S) management requirements for occupational health and safety management systems (OHSMS). It was developed by the OHSAS Project Group, a consortium of 43 organizations from 28 countries. This consortium includes national standards bodies, registrars (certification bodies), consultants, and occupational health and safety institutes.

This new **OHSAS 18001:2007** standard was officially published during July of 2007. It cancels and replaces OHSAS 18001:1999. Since it was first published in 1999, OHSAS 18001 has rapidly become the most widely used international occupational health and safety management standard. It applies to all types of organizations. It doesn't matter what size they are or what they do. The purpose of OHSAS 18001 is to help organizations to manage and control their occupational health and safety risks and to improve their occupational health and safety performance. They can achieve this purpose by developing an occupational health and safety management system (OHSMS) that complies with the standard.

An OHSMS is a network of interrelated elements. These elements include responsibilities, authorities, relationships, functions, activities, processes, practices, procedures, and resources. These elements are used to establish OH&S policies, plans, programs, and objectives.

“OHSAS 18001:2007 OHS Internal Auditor Training” competency-based 2-day course focuses on teaching students an effective approach for auditing occupational health and safety (OH&S) management systems. The primary objective of this training course is to instruct OH&S auditors in the principles and practices specific to auditing for conformance with BS OHSAS 18001:2007, including planning of and preparation for the audit, audit practices, and reporting audit findings. This internal auditor course is intended to provide a general appreciation of OH&S management systems auditing that will equip attendees with the skills necessary to actively participate in internal and second-party audits.

Learning Outcomes/Objectives

Also available as
in-house programme

This training is designed to give you the relevant skills and knowledge to assess and report on the conformance and effective implementation of an OHS management system. The purpose of this training is to equip delegates with the knowledge and skills needed to perform internal audits on occupational, health & safety management systems and to contribute to the continual improvement of the management system. On training completion participants will be able to:-

- ✓ Brief understand occupational health and safety management definitions, concepts, and guidelines
- ✓ Overview of the purpose of OHSAS 18001:2007
- ✓ Understand the requirements of the OHSAS 18001:2007 standard
- ✓ Understand the roles and responsibilities of the internal auditor
- ✓ Apply ISO 19011:2011 definitions, concepts, and guidelines
- ✓ Recognize the principles, practices, and types of audits
- ✓ Conduct all phases of an internal audit (plan, execute, report, record, follow-up, closure)
- ✓ Prepare and present effective reports
